MANUAL TÉCNICO

CONTENIDO

1. Objetivos.....	4
1.1. Objetivos específicos	4
2. Alcance	4
3. Requerimientos técnicos	4
3.1 Requerimientos mininos de Software	5
3.2 Requerimientos mininos de Hardware.....	5
4. Herramientas utilizadas para el desarrollo	5
5. Instalación/Ejecución.....	5
6. Configuración	6
7. Análisis	6
8. Diseño de la Arquitectura.....	12
9. Desarrollo.....	26
10. Privilegios de Usuario:	250

1. Objetivos

El principal objetivo de este documento es mostrar el funcionamiento del programa desarrollado, al mismo tiempo en el que se muestra como fue diseñado el sistema y sus diversas características. El manual esta dirigido al programador que quiera dar un vistazo a como es que el programa fue diseñado y ver sus diferentes etapas, también representaciones visuales a través de diversos diagramas y conocer el código fuente de este.

En caso de algún fallo del software, este manual puede resultar de gran ayuda al programador que intente resolver todos los inconvenientes causados.

1.1. Objetivos específicos

- Mostrar el código fuente para una posible actualización del programa
- Requisitos para la ejecución de la aplicación
- Evidencias del desarrollo del programa antes de la implementación (diagramas de clase, diagramas de casos de uso, diagrama de objetos, etc.)

2. Alcance

El manual esta dirigido a los programadores y a cualquier persona que tenga autorización para manejar el programa, en especial los administradores

Conocimientos necesarios: Lenguaje de programación Java y bases de datos en PostgreSQL.

3. Requerimientos técnicos

Software

- Gestor de bases de datos PostgreSQL: Para la administración de toda la información guardada tal como los datos de los empleados, datos de la nómina, datos de evaluaciones, etc.
- IDE para Java: Un IDE que permita programar en Lenguaje de programación Java, el mejor ejemplo es el programa NetBeans
- Lector de archivos PDF: Un programa que permita leer archivos PDF, el mejor ejemplo es el programa Acrobat Reader DC

Hardware

- Una computadora completa. Con esto nos referimos a que cuente con teclado, pantalla, ratón, etc.

3.1 Requerimientos mínimos de Software

Privilegios de Administrador: No

Sistemas operativos soportados: Windows 7, 8, 8.1, 10

3.2 Requerimientos mínimos de Hardware

Procesador: Intel inside 1.5 ghz

Memoria RAM: 512 mb

Disco Duro:

4. Herramientas utilizadas para el desarrollo

- IDE Netbeans: Con este IDE se generó todo el código del programa, ya que está estructurado en Java
- Gestor de bases de datos PostgreSQL: Para la administración de toda la información guardada tal como los datos de los empleados, datos de la nómina, datos de evaluaciones, etc.

5. Instalación/Ejecución

En si el programa no necesita ninguna instalación ya que solo será un archivo ejecutable que nosotros entregaremos a la empresa junto con la base de datos ya diseñada, en ese caso lo mejor es que se instale PostgreSQL en los equipos en los que se utilizara dicho programa

El programa aparecerá de la siguiente manera:

Y para empezar a usar el programa solo sería ejecutarlo y a continuación aparecería la ventana de inicio

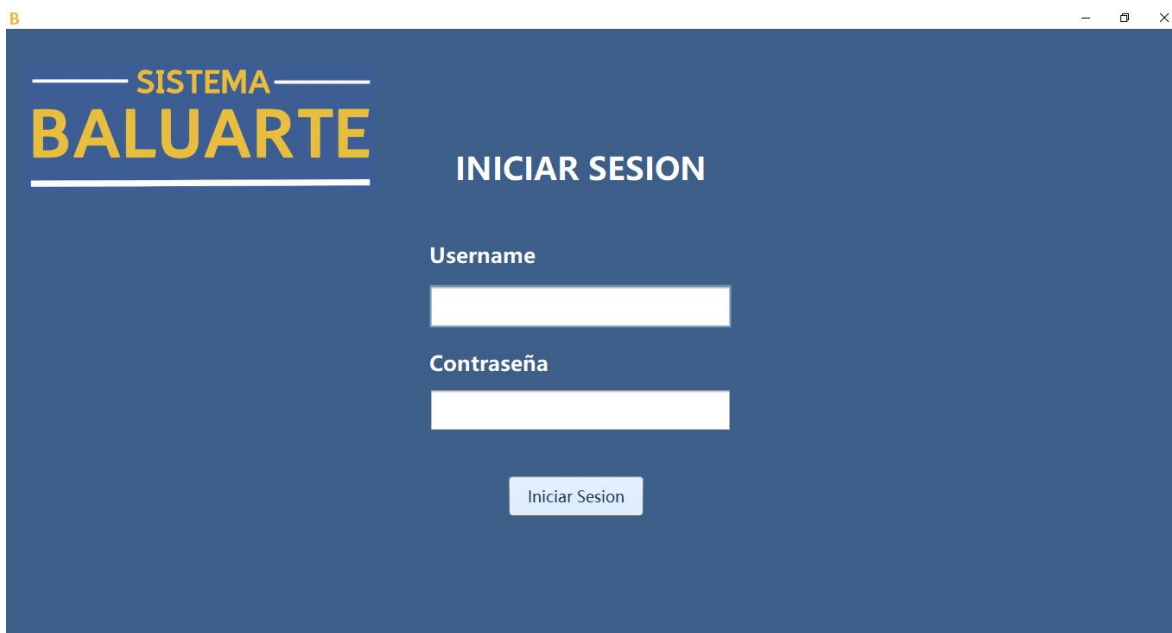

Ilustración 1 Ventana de inicio

Y después de que ingreses el Username y la Contraseña se podrá usar el programa libremente

6. Configuración

No hay una configuración general para la aplicación, en si viene configurada y los comandos son intuitivos para el usuario o programador que quiere manejar el programa y hacer modificaciones al sistema.

7. Análisis

Cuando fuimos a consultar la problemática de la empresa recabamos la siguiente información:

Problemáticas:

1. Falta de automatización en las áreas de contabilidad y recursos humanos

- Sistema de inventariado, sistema de costos y gastos, fijación de precios y nóminas y estados financieros

- Evaluación de personal a través de encuestas de rendimiento realizadas por el encargado de área y los resultados tienen que entregarse cada final de semana/mes. Esta ventana tiene que estar conectada a SQL
- Rubrica de tareas
- Cálculo de nómina con relación a los reportes semanales de la evaluación de rendimiento y la rúbrica de tareas

2. Falta de organización

- Control de actividades contables: organización de citas, reuniones, actividades propias y conjuntas

Toda esta información fue analizada y depurada para empezar con el desarrollo del programa. En los siguientes diagramas se registra el avance del proyecto.
